Introduction to Pitch Circle Diameters (PCD)

The wheel studs or wheel bolts are inserted into holes drilled into the hubs. These small holes are drilled equally spaced on the circumference of a circle centred on the axis of the wheel bearings. The diameter of this circle is called the Pitch Circle Diameter or PCD. It is essential that the PCD of the hub and the PCD of the wheel correspond exactly.

The following tables show the common PCD's used in the **Burquip**'s axle and wheels range.

PCD	Code	C (mm)	No of Holes (n)	Diameter (mm)
4/100	.01	70.711	4	100
5/114.3	.02	67.184	5	114.3
5/165.1	.03	97.043	5	165.1
6/139.7	.04	69.850	6	139.7
6/205	.05	102.500	6	205
8/275	.06	105.238	8	275
5/150	.07	88.168	5	150
4/114.3	.08	80.822	4	114.3
Special	.09			
10/335	.10	103.521	10	335
4/139.7	.11	98.783	4	139.7
5/140	.12	82.290	5	140
5/112	.13	65.832	5	112
5/120.65	.14	70.916	5	120.65
10/225	.15	69.529	10	225

Where C is the distance between consecutive hole centers.

Special PCD's are those that we rarely drill, e.g. 4/108; 4/101.6; 5/127, etc. If we see that a specific special PCD is becoming popular we will denote it with the next available number.

PCD are calculated according to the following formula using the symbols defined above:

$$PCD = \frac{C}{SIN\ (180^{\circ}/n)}$$
